## E-Blitz Basic Data

**Project Title:** E-Blitz Basic Data

**Project Description:** A web-based system to allow the posting of new documents for review and approval. Automatic notification will be sent to appropriate parties who can review the document on their own, meet comments, ask questions, request a meeting and electronically approve.

**Description of Opportunity / Benefits:** Currently our process is very manual. Country businesses send the approval form, request a review meeting, and approve process and post. This process is very time consuming. This leads to follow-up meetings with senior management required to get signature approval. As a result, the approval process is delayed. According to access to senior management. A web-based system for new approvals would digitize the process, reduce cycle time, standardize the approval process, provide rapid interaction, a central document repository and electronic approvals through a security system.
